Muskan Chauhan

+91-9319269447 | Gurugram, Haryana | muskanchauhan8509@gmail.com | LinkedIn | GitHub | Portfolio

OBJECTIVE

To secure an internship or entry-level role in AI/ML and software development where I can apply my Python, machine learning and web development skills to build reliable, data-driven applications and keep learning from real-world problems. B.Tech. Computer Science (AI & ML) student (CGPA: 8.5/10) with experience in data analysis, model development and deploying live web applications.

SKILLS

Languages: Python, C, Java, R, JavaScript, HTML, CSS
Data Science & ML Libraries: NumPy, Pandas, Matplotlib, Scikit-learn, XGBoost, LightGBM
Machine Learning: Regression, Classification, Predictive Modeling, Model Evaluation
Development Tools: Jupyter Notebook, Jupyter Lab, VS Code, Git, Streamlit
Soft Skills: Leadership, Communication, Team Collaboration, Problem Solving

EXPERIENCE

HR Intern – FRAQ Department | Maruti Suzuki India Limited, Gurugram Plant | *July 2026 | 1 Month*

- Gained hands-on corporate experience working with real-world employee dormitory datasets.
- Verified accommodation records to identify discrepancies in room and bed allocation.
- Supported data accuracy and validation for employee accommodation management.

AI/ML Intern (Virtual) | Infosys Springboard – Virtual Internship 6.0 | *2024*

- Selected for Infosys Virtual Internship 6.0 after qualifying 19 AI & ML preparatory courses on Infosys Springboard.
- Developed AI Price Optima, an AI-powered pricing application, from a Kaggle dataset of 1,00,000 rows and 14–16 columns.
- Cleaned the data and selected features, reducing it to 10,000 rows and 8–10 columns for focused model training.

PROJECTS

DeadLineZero | Live Demo / GitHub | *TypeScript, Vite, Node.js, Gemini API*

- Built a deadline-tracking web app that helps users schedule and prioritise workloads so due dates are not missed.
- Integrated the Gemini API to generate an AI coach analysis of the user's workload, plus one-click workload presets such as Student Final Exams, Product Launch Week and Life & Move Organizer.
- Added a dashboard showing tasks completed, total workload hours and active alerts; developed with TypeScript, Vite and Node.js and deployed live on Google Cloud Run.

Damage Claim Verification | Live Demo | *JavaScript, HTML, CSS*

- Built a browser-based Evidence Review Desk that checks car, laptop and package damage claims against submitted photos, claimant history and fixed evidence rules.
- Made every decision deterministic and transparent: each result shows the rule that produced it and a confidence score, with no AI model or API key, and can be copied as JSON.
- Screened photos locally in the browser for size, lighting and sharpness (never uploaded), and flagged risks such as claim history and prompt-injection text for manual review.

EDUCATION

B.Tech. in Computer Science Engineering (AI & ML) | Dronacharya College of Engineering, Khetawas
2024 – Present | CGPA: 8.5 / 10

Class XII – CBSE | CCS Sr. Sec. School, Haryana | *90.2%*

Class X – HBSE | Dronacharya Sr. Sec. School, Haryana | *96.8%*

CERTIFICATIONS

- Microservices Development on Azure with Java – Infosys
- Communication and Presentation Skills – TCS iON
- Web Development Course – Simplilearn
